ENGR[X] is the additional, non-credit component of the Texas A&M Engineering curriculum that sets our students apart. The ENGR[X] program allows students to grow their educational experience, in an exponential way, by participating in one of many different X-factor activities.

X-factor activities are found in five key areas:

- Global experience
- Entrepreneurship and innovation
- Leadership
- Selfless service
- Extended knowledge

ENGR[X] will provide students with substantive interaction with their faculty and peers. Students may participate in study abroad, an internship or co-op experience, Aggies Invent, Startup Aggieland, undergraduate research, Engineering Without Borders, the Zachry Leadership Certificate program, and many other opportunities that are available to them.

ENGR[X] will be a requirement for engineering students entering Texas A&M in the fall of 2017.

For more information about supporting ENGR[X], contact:
